2005 Fact Sheet

The **2005 Lebanon (Private) GSHS** measured alcohol and other drug use; unintentional injuries and violence; hygiene; dietary behaviours and overweight; mental health; and protective factors.

The 2005 Lebanon (Private) GSHS was a school-based survey of students in 7th grade, 8th grade, and 9th grade. A two-stage cluster sample design was used to produce data representative of all students in 7th grade, 8th grade, and 9th grade in Lebanon (Private). At the first stage, schools were selected with probability proportional to enrollment size. At the second stage, classes were randomly selected and all students in selected classes were eligible to participate. The school response rate was 89%, the student response rate was 97%, and the overall response rate was 86%. A total of 2,831 students participated in the Lebanon (Private) GSHS. Students self-reported their responses to each question on a computer scannable answer sheet. For comparison purposes, only students aged 13-15 years are included in the analyses for this fact sheet.
